

## EDUCATION

---

### Georgia State University – Atlanta, GA Bachelor of Science in Computer Science | Expected July 2026

- Relevant Coursework: Data Structures, Algorithms, Systems Programming, Operating Systems, Computer Organization, Software Engineering, Software Development, Mobile App Development, Web Programming, Cybersecurity Fundamentals, Data Science Fundamentals

## WORK EXPERIENCE

---

### Freelance

#### Software Engineer and Client Manager | Georgia | June 2024 – Present

- Led end-to-end development of 6+ **full stack web applications** for local client facing businesses using **HTML, CSS, JavaScript, PHP, and SQL** translating business needs into scalable, user-friendly, and production ready software.
- Acted as the client's point of contact conducting meetings for feature requirements, updating with progress of development, and making sure business goals are aligned with deliverables.
- Gathered requirements through conversations with clients and translated business needs to technical solutions demonstrating strong communication and product thinking skills.
- Managed ongoing client relationships with an on retainer-based system for clients, allowing for client product to have consistent updates with new features, content, and enhancements.
- Provided full product life cycle including development, deployment, and refinement for products, using **Vercel** hosting, **MySQL** for database configuration, and **Git** based version control.
- Improved product usability, accessibility, and performance, directly contributing to an average of **20%** increase in user engagement through client projects.

### Select Management Resources

#### Software Engineer Intern | Alpharetta, Georgia | January 2023 – July 2023

- Developed **Python** and **JavaScript** scripts to streamline troubleshooting workflows, reduce repetitive operational tasks, and improve incident response efficiency.
- Designed and maintained structured technical documentation, system guides, and process workflows, improving onboarding efficiency by **20%**.
- Investigated application, system, and network issues through log analysis, ticket data review, and root cause analysis, contributing to a **25%** reduction in recurring incidents.
- Collaborated with infrastructure and operations teams to identify system reliability issues and implemented scalable solutions.
- Debugged and resolved complex software and system issues using structured problem solving, scripting-based validation, and logical decomposition.
- Produced internal reports and dashboards to track issue trends and performance metrics, enabling data driven operational decisions.

## PROJECTS

---

#### **Pop: Breathwork and Mindfulness App (User Case Study and Development) (Flutter, Dart, SQLite, SharedPreferences, Figma)**

- Conducted user research with **20+** participants to analyze breathwork habits, barriers to adoption, and existing tools and applications that could be competition or a product to learn from.
- Synthesized findings into major addressable pain points identifying lack of guidance, difficulty to entry, and progress tracking as primary barriers and using findings to define core product problems.
- Led user onboarding and testing sessions, guiding users through breathwork features, collecting feedback and engagement insights, and translating user needs into improved usability and feature enhancements
- Developed animated visual cues and real time countdowns to effectively demonstrate the four-step box breathing process complemented by customizable haptic feedback.
- Defined success metrics through testers including factors such as retention, likelihood of continued usage, session frequency, and session durations.

#### **Atlas: Social Fitness & Nutrition Platform (Product Development and Client Study) (Flutter, Dart, Figma, Firebase, REST APIs, AI APIs)**

- Led and developed a mobile application that combines fitness tracking, nutrition logging, Artificial Intelligence driven planning, and social media functionality.
- Gathered user data and feedback from **20+** testers to shape product direction feature prioritization, and optimize refinement process, iterating on features that provide most impact to the real users of the platform.
- Led user onboarding and testing sessions, demonstrating product functionality, collecting feedback and engagement insights, and translating client requests into prioritized feature enhancements
- Built an Artificial Intelligence powered assistant using OpenAI API to generate personalized workout and meal plans through structured prompt engineering based on user constraints (equipment, dietary preferences, environment).

#### **ML Debug Assist (Python, scikit learn, YAML, CLI, TF-IDF)**

- Designed and built a fully local ML-powered debugging assistant that classifies Python runtime errors using a hybrid rule-based and machine-learning approach to generate structured troubleshooting guidance.
- Implemented an end-to-end pipeline covering synthetic dataset generation, text preprocessing, TF-IDF feature extraction, and multiclass Logistic Regression training.
- Added confidence-aware inference logic to dynamically adjust output, surfacing multiple candidate error categories and prompting for additional context when predictions were uncertain.

## TECHNICAL SKILLS

---

- Programming Languages: Python, Java, JavaScript, C++, C, C#, Dart, HTML, CSS, SQL, PHP, YAML
- Technologies: GitHub, Git, Emulators / Simulators, Xcode, Microsoft Office, Google Suite, MySQL, DBaver, Firebase, Linux, Unix, Command Line, Unit Testing, Data Structures, Algorithms, Flutter
- Core Skills: Object Oriented Programming, Database Management, Full stack Development, App Development, Web Development, Debugging, Troubleshooting, Automation Scripting, UI/UX, Server-Side Programming, Version Control, REST APIs, AI API Integrations, Prompt Engineering, State Management, Authentication, Authorization, Mobile UI Architecture
