

EDUCATION

Georgia State University – Atlanta, GA Bachelor of Science in Computer Science | May 2026

- Relevant Coursework: Data Structures, Algorithms, Systems Programming, Operating Systems, Computer Organization, Software Engineering, Software Development, Mobile App Development, Web Programming, Cybersecurity Fundamentals, Data Science Fundamentals

WORK EXPERIENCE

Freelance

Product / Software Engineer | Georgia | June 2024 – Present

- Led end-to-end development of **6+ full stack web applications** for local businesses translating business needs into scalable, user-friendly, and production ready software.
- Conducted client requirements discovery through conversations with clients to define scope, features, and business user needs into technical solutions demonstrating strong communication and product thinking skills.
- Improved product usability, accessibility, and performance, directly contributing to an average of **20%** increase in user engagement through client projects.
- Managed full product life cycle including development, deployment, and refinement for products, using **Vercel** hosting, **MySQL** for database configuration, and **Git** based version control.
- Designed authentication systems, including flows for logging in and creating accounts, password hashing, session management, and input validation to prevent security risks.

Select Management Resources

Software Engineer Intern | Alpharetta, Georgia | January 2023 – July 2023

- Developed **Python** and **JavaScript** scripts to streamline troubleshooting workflows, reduce repetitive operational tasks, and improve incident response efficiency.
- Designed and maintained structured technical documentation, system guides, and process workflows, improving onboarding efficiency by **20%**.
- Investigated application, system, and network issues through log analysis, ticket data review, and root cause analysis, contributing to a **25%** reduction in recurring incidents.
- Collaborated with infrastructure and operations teams to identify system reliability issues and implemented scalable solutions.
- Debugged and resolved complex software and system issues using structured problem solving, scripting-based validation, and logical decomposition.
- Produced internal reports and dashboards to track issue trends and performance metrics, enabling data driven operational decisions.

PROJECTS

Pop: Breathwork and Mindfulness App (Product Case Study and Development) (Flutter, Dart, SQLite, SharedPreferences, Figma)

- Conducted user research with **20+** participants to analyze breathwork habits, barriers to adoption, and existing tools and applications that could be competition or a product to learn from.
- Synthesized findings into major addressable pain points identifying lack of guidance, difficulty to entry, and progress tracking as primary barriers and using findings to define core product problems.
- Developed animated visual cues and real time countdowns to effectively demonstrate the four-step box breathing process complemented by customizable haptic feedback.
- Integrated local data management with **SQLite** to record breathing session details including date, start/end times, and duration facilitating progress tracking.
- Implemented dynamic light/dark theme toggles and personalized haptic settings using **SharedPreferences** to ensure a tailored and intuitive user experience.
- Designed a modular interface with dedicated pages for Home, Breathing, Log, Settings, and informational guidance, providing clear instructions on the benefits and techniques of box breathing.
- Defined success metrics through testers including factors such as retention, likelihood of continued usage, session frequency, and session durations.

Atlas: Social Fitness & Nutrition Platform (Product Development) (Flutter, Dart, Figma, Firebase, REST APIs, AI APIs)

- Led and developed a mobile application that combines fitness tracking, nutrition logging, Artificial Intelligence driven planning, and social media functionality.
- Gathered user data and feedback from **20+** testers to shape product direction feature prioritization, and optimize refinement process, iterating on features that provide most impact to the real users of the platform.
- Implemented secure authentication, user profiles, posts, likes, comments, and follower relationships using Firebase Authentication, Firestore, Storage, and security rules.
- Integrated multiple third-party REST APIs to support exercise discovery, workout logging, macro tracking, barcode food lookup, and nutrition data retrieval.
- Built an Artificial Intelligence powered assistant using OpenAI API to generate personalized workout and meal plans through structured prompt engineering based on user constraints (equipment, dietary preferences, environment).
- Created modular application pages including Feed, Tracking (Workouts & Nutrition), Artificial Intelligence Assistant, and Profile pages with scalable data models and role-based access control.

TECHNICAL SKILLS

- Programming Languages: Python, Java, JavaScript, C++, C, C#, Dart, HTML, CSS, SQL, PHP, YAML
- Technologies: GitHub, Git, Emulators / Simulators, Xcode, Microsoft Office, Google Suite, MySQL, DBEaver, Firebase, Linux, Unix, Command Line, Unit Testing, Data Structures, Flutter, Figma
- Core Skills: Object Oriented Programming, Database Management, Full stack Development, App Development, Web Development, Debugging, Troubleshooting, Automation Scripting, UI/UX, Server-Side Programming, Version Control, REST APIs, AI API Integrations, Prompt Engineering, State Management, Authentication, Authorization, Mobile UI Architecture, Wireframing, User research, Feature research, Product Road mapping
